

Improving life through heat transfer solutions

BOILER OPERATOR TRAINING

This core module is delivered by Fulton as a two-day training course.

Day One City & Guilds Accredited Boiler Operator Training

This course provides your boiler operator certification to support HSE boiler operator recommendations as identified in HSE guidance document INDG 436 and BG01 for safe operation of steam boilers, by supporting a person's competence when operating a steam boiler.

It also includes:

- Operation
- Daily/Weekly Routine Maintenance
- Health & Safety
- Legislation

Day Two Practical Boiler Operator Training

The second day supports and helps to confirm operational competence unless proof of site operational competence testing is available. This hands-on training is aimed at staff dealing with daily and weekly routines (as advised in the boiler manual), features question and answer sessions, and includes ongoing basic boiler maintenance. It also includes recommended preventative maintenance regimes and builds on the key foundation skills already obtained on Day One.

All training can be provided on site and tailored to your steam boilers. Training attendance certificates are issued on successful completion of the course.

It is recommended that candidates take a refresher course after 3 years to receive re-certification, as advised by City & Guilds.

Additional training (e.g. Steam & Condensate System and Water Treatment) can be added as required, with further information available on request.
