Springfield University Hospital

Case Study

Springfield University Hospital transforms mental health services for 1.1m south west Londoners

The £150m Springfield Hospital Development will see the construction of two new mental health facilities set to open in 2022 on the trusts' largest site in Tooting.

The design is focused on creating strong visual and physical connections with nature; ample daylight, natural ventilation and access to outdoor spaces. In addition to creating safe, homely surroundings for patients, a strong emphasis is put on creating optimum working environments for staff.

Working with C.F Moller and Sir Robert McAlpine, Hygenius have designed and installed bespoke furniture for forensic and non-forensic areas including 135 bedrooms, receptions, kitchens and café areas, multi-faith rooms, breakout areas and much more.

Every detail plays a part in creating non-institutional, pleasant healthcare environments. Materials for both the exterior and interiors have been carefully selected and chosen for their durability, sustainability and beauty. Chosen for its strength and durability, Lacquered birch plywood heavily featured in our furniture design.

The Springfield Hospital Development will provide a range of benefits for patients, the trust and local community. It offers extensive community healthcare, allowing people to be treated closer to their home. In addition to the health facilities, there is a 32-acre public park, community shops and café and 839 new homes being built for local residents in Tooting.
